**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 01 April 2008 and 11 March 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on 11 March 2008 and 01 April 2008 have been entered.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1- 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sony (JP 09-182014) in view of Takahashi (6636266).

Regarding claims 1-2,3 and 5, Sony teaches an information-recording /reproducing apparatus (Fig. 3) for recording digital information in an information-recording medium (Fig. 4) in accordance with a recording format in which two types of information-recording lengths exist, said digital information including image information having a first information-recording length -audio information having a second information-recording length, said second information-recording length being shorter than said first information recording length, the information-recording apparatus comprising:

a recorder for recording the digital image information and the -audio information in said information-recording medium,

wherein the recorder records a pilot signal between a recording portion of the-digital image information V2 having the first information-recording length and a recording portion of the audio information A4 having the second information-recording length, said the pilot signal serving as a reference during reproduction of said digital image information and said-audio information.

Sony fails to specifically teach that the pilot signal is a servo control signal .

Takahashi teaches a recording / reproducing apparatus having means for generating pilot signal as a servo control signal and for recording the servo control signal on a medium and for using the reproduced servo control signal to control

reproducing the recorded image and audio information (Fig. 7, column 13, lines 5-20, column 14, lines 5-40) .

It would have been obvious to one of ordinary skill in the art to modify Sony with Takahashi by using a generating means as taught by Takahashi with the apparatus of Sony for generating the pilot signal of Sony as servo control signal thereby improving the control of the reproducing recorded audio and image information from the medium .

Regarding claims 4 and 6, Sony further teaches using EEC processing means (Fig. 3) for correcting the reproduced image and audio information
